PROFESSIONAL SUMMARY

Since I remember I was in love with computers, gaming consoles, football and Cheese :-D. From 17 or maybe 16, I started programming in collage with QBasic, then in university with C# and now I work on PHP Laravel. It's not important to me that which programming language I code, I just love back-end programming and learn anything I need. I'm in love in new methodologies and technologies too, which improve my skills. Never stop and never hopeless.

WORK EXPERIENCE

Technical Team Lead

Ernyka

Jun 2019 - Present

At Excoino team, we are working on a cryptocurrency exchange in Iran including about 25 top cryptos to deposit, change and withdraw. My responsibilities are in analysis, design and coding.
<https://www.excoino.com>

Co-Founder and Team Lead

VAMX

May 2018 - Jun 2019

We started a startup that was working on loan management and crowd-funding. About 1 year we worked on the project but there was no support from any investor, so we were forced to end the journey.

Technical Team Lead

Dunab Ertebat

Sep 2017 - May 2019

Working on Web and Blockchain projects, especially on Fintech, Crypto-currencies, Financial apps and HR.

Working on Coinestan that is a platform to buy or sell Crypto-currencies like Stellar Lumens in Iranian Rial.

I, as the team lead, was the responsible of these projects from the scratch to money-making stage.

Co-Founder and Lead Developer

Gilas Software Group

Aug 2015 - Sep 2017

I cofounded Gilas as a web development team that work on startups. We got expanded and I as the technical team manager was responsible for managing and mentoring our dev team. We had one startup launched named TOJA, an event manager platform. We developed some projects for our customers that have diffrence businesses in food, jewelry, transport and fintech industries. I thought that I should move on for more and more progress... So, I got separated from the team and changed my environment.

Web Developer and International Business Coordinator

Feb 2014 - Nov 2016

Fara Computer

I had three responsibilities here. I should develop websites, working on int'l communication and also some technical responsibilities for a French product.

Developing on company website for the best show for our int'l partners, was my main duty. After that, communicating and negotiation with the foreign partners or customers was another job for me. In this position, I took five companies partnership from Europe countries include France, Italy, Germany and Malta.

Effective development for the FaraComputer website, persuaded SimplyDesk (one of our French partner) that outsource the development of their English website to us; and we made it.

I was also responsible for technical things about Wooxo that is a Linux-based physically protected NAS solution for the enterprise companies. I, personally offer the backup solutions models and also done configurations on the device.

Software Security Solutions

Jun 2011 - Feb 2014

Fara Computer

I started my professional career from this company. At the first, because of my knowledge about Linux, I started to work on the backup solutions. There was a device named Wooxo that is a Linux-based physically protected NAS solution for the enterprises. Configuration, installation and supporting of the device was my duty.

After months, I took another responsibility for configuration, installation and supporting of a network inventory and helpdesk system named GIMI. Our team grew up and we got expanded. Some of my duties on Wooxo, got assigned to the team member and I learn them how to do the job. I focused on GIMI and the project was ongoing.

Another solution appears and I, as the team leader, took that. A DLP (data leakage protection) software that I was responsible to offer solutions based on it. After months, I just promoted and took another position in the company but still helped the technical team.
